Detailed Pressure Analysis

Figure 5- Pressure vs. working hours

Notice: backpressure distribution was shown into two diagrams. As obvious in figure 5, stop-working periods were eliminated and pressure was displayed along working hours.

Notice: Data logger sampling time can be calculated from Figure 12. The lines parallel with Date axis show days without data logger data. As depicted in Figure 12, data logger didn't sample four days because bus was stationary.

Filter Operation Analysis

- As depicted in figure 1, 0.01% of total working time pressure is above 200 mbar and 0.13% above 150 mbar during this period. This low pressure distribution was because of the cleaning issue which was done on Dec 19th.
- Figure 2 displays flow temperature distribution for DPF's upstream. It can be obviously observed 1% of total working time temperature is above 350°C.
