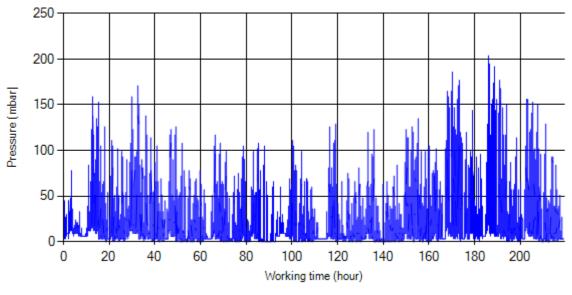

Figure 5- Pressure vs. working hours

Notice: backpressure distribution was shown into two diagrams. As obvious in figure 5, stopworking periods were eliminated and pressure was displayed along working hours.

Filter Operation Analysis

- As depicted in Figure 1, pressure above 200 couldn't be observed and only 0.50% of total working time pressure is above 150mbar.
- Figure 2 displays flow temperature before the DPF. It can be obviously observed that 8% of total working time temperature is above 400 °C and 15% above 350°C. This high temperature distribution is one of the important factors for filter excellent operation during the period.

Filter operation status	Excellent	Good 🗆
Filter operation status	Maintenance required 🗆	Failed
