# Filter Operation Analysis

- As depicted in figure 1, only 0.27% of time pressure was above 150 mbar and pressure above 200 mbar was not observed.
- Figure 2 displays flow temperature distribution for DPF's upstream. It can be obviously observed that 7.6% of total working-time temperature is above 400 °C and 12.3% above 350°C.
